Sawgrass Creative Studio Every Sawgrass SG1000 comes with a free license to CreativeStudio, the only design tool built specifically for sublimation. CreativeStudio takes the frustration out of creation by including built-in product templates, thousands of ready-to-use designs, and a seamless integration with your Sawgrass SG1000 printer. An individual account is included with every Sawgrass printer purchase, and premium membership is available for unlimited access to additional features and artwork.

Sawgrass Print Manager Because different materials and papers affect the way colors appear on sublimated items, it's important to adjust the ink output to ensure optimal quality. Sawgrass Print Manager is a software utility that automatically makes those adjustments for you. Print Manager works in the background, managing the flow of color information from your digital artwork to your Sawgrass printer. This reduces wasted ink (saving you money) and ensures the colors on your finished products are as accurate and vibrant as possible.
